

Restaurant Management System

Complete QR-based digital dining and restaurant operations platform designed to improve customer experience, reduce waiter workload, and streamline restaurant operations.

Customer Experience

1. QR-Based Ordering

Customers simply scan the QR code placed on their table using their phone. No app installation is required.

2. Digital Menu

Customers can browse the restaurant menu with categories, prices, descriptions, and images.

3. Smart Recommendations

The system intelligently recommends complementary dishes, beverages, and desserts based on customer selections to improve the dining experience.

4. Shared Group Ordering

Multiple guests sitting at the same table can join the same dining session and collaboratively add items to a shared cart.

5. Real-Time Order Tracking

Customers can track their order progress in real time:

Order Placed

Accepted

Preparing

Ready

Served

6. Bill Request

Customers can request the bill directly from their phone without waiting for staff assistance.

7. Digital Feedback

Customers can provide ratings and comments about food quality and service directly from the system.

Restaurant Operations

1. Owner Dashboard

The restaurant owner can monitor and manage all restaurant activities from a centralized dashboard.

2. Live Kitchen Display System (KDS)

Kitchen staff receive orders instantly and can update preparation status in real time.

3. Table Management

The system displays all restaurant tables with live status updates:

Vacant

Occupied

Ordering

Bill Requested

Paid

4. Table Session Management

Every table visit is assigned a unique session. This prevents new customers from seeing previous customers' orders, carts, or information.

5. Inventory Management

Restaurant staff can mark menu items as In Stock or Out of Stock, which updates instantly across all customer devices.

6. Revenue Analytics

The dashboard provides insights such as:

Daily Revenue

Active Orders

Average Bill Value

Top Selling Dishes

Table Occupancy

7. Receipt Generation & Archive

After payment, professional receipts are automatically generated, archived, and backed up for future reference.

Payment Workflow

1. Customer requests the bill.
2. Staff receives a payment notification.
3. Payment is recorded.

4. Receipt is generated automatically.
5. Table is settled and cleared.
6. A new dining session is created for the next customer.

Technical Advantages

- Real-time synchronization between customer devices, kitchen, and management dashboard.
- Cloud-based database using Supabase.
- Automatic receipt backup and recovery.
- Offline recovery and synchronization support.
- Mobile-first responsive design.
- Secure session-based architecture.
- Multi-device support for phones, tablets, and laptops.

Business Benefits

- ✓ Faster service
- ✓ Reduced waiter workload
- ✓ Improved customer experience
- ✓ Better kitchen coordination
- ✓ Accurate billing and reporting
- ✓ Increased operational efficiency
- ✓ Real-time restaurant insights
- ✓ Scalable for future growth

This system provides a complete digital dining experience while giving restaurant owners full visibility and control over daily operations.
